

# APPH20G Specification V1.22 (July 2013)

A fully integrated high-performance cross-correlation signal source analyzer for 5 MHz to 26GHz

# Introduction

The APPH2oG an integrated solution that offers an indispensable set of measurement functions for evaluating signal sources ranging from VHF to microwave frequencies such as crystal oscillators, PLL synthesizers, clocks, phase-locked VCOs, DROs, and others.

The flexible instrument comprises a two-channel cross-correlation system with two internal tunable references sources and allows also measurements with external references.

The APPH2oG provides a complete set of measurement such as absolute and additive phase noise measurements, direct access to the two channel 50 MHz FFT analyzer, or frequency counter function, time-domain transient and power measurements.

Using proven cross-correlation measurement procedures and self-calibration routines, reproducible, and accurate measurements are obtained even under changing environmental conditions. Fully automated frequency acquisition and self-calibration greatly simplify use and applicability of the instrument, resulting in much faster measurement throughput and greater ease-of-use in actual operation.

It is a compact and powerful instrument available with LAN (VXI-11), USBTMC, or with GPIB (optionally) interfaces. Platform independent intuitive graphical user interface (GUI), API library, and powerful SCPI command language set is available.

Measurement supported:

- Frequency counter
- Power level detector
- Additive or absolute phase noise measurement
- Transient measurements
- 50 MHz bandwidth FFT analyzer mode

# **Specifications**

The specifications in the following pages describe the warranted performance of the instrument for  $25 \pm 5$  °C after a 30 minute warm-up period. Typical specifications describe expected, but not warranted performance. Min and Max specifications are warranted.

| Parameter | Min. | Тур. | Max. | Note |  |  |
|-----------|------|------|------|------|--|--|
|           |      |      |      |      |  |  |

#### Phase Noise Measurement (absolute) **Measurement parameters** SSB phase noise [dBc/Hz], Spurious noise [dBc], Integrated rms phase deviation [deg, rad] or time jitter [s], Residual FM/PM [Hz rms] **RF Frequency Range** 5 MHz 26 GHz using internal sources 7 GHz using external sources 5 MHz **Input Power Range** +26 dBm is damage level -15 dBm +20 dBm < 400 MHz -5 dBm +20 dBm 400 < f <1500 MHz -10 dBm +23 dBm 1500 < f <18000 MHz 5 dBm +23 dBm >18000 MHz Input impedance AC coupled, 10V DC max **50** Ω VSWR 2 **Offset Analysis Range** 0.1 Hz 50 MHz for RF > 70 MHz for RF < 70 MHz 20 MHz 5 MHz RF < 25 MHz < 10 Hz offset **Measurement Accuracy** ±4 dB < 1 kHz offset ±3 dB ±2 dB > 1 kHz System Phase Noise Floor (cross-correlation, external references) 1 Hz -140 dBc/Hz 10 Hz -150 dBc/Hz See plot for sensitivity of 100 Hz -160 dBc/Hz internal sources 1 kHz -175 dBc/Hz 10 kHz -180 dBc/Hz 10 MHz -180 dBc/Hz

#### **Phase Noise Measurement (additive)**

| Measurement parameters      | SSB phase noise [dBc/Hz],<br>Spurious noise [dBc],  |  |         |                           |

|------------------------|---------|-----------|---------|
| Measurement parameters | Po      | wer mW ,d | Bm      |
| Frequency Range        | 5 MHz   |           | 13 GHz  |
| Accuracy               |         | 1.5 dB    |         |
| Power Range            | -10 dBm |           | +15 dBm |

#### Phase Noise Sensitivity (dBc /Hz)

Measurement time ~25 seconds, after first cross-correlation; further correlations will improve sensitivity by 5 dB by for 10, 10 dB for 100, and 15 dB for 1000 respective correlations performed.

#### **Measurement Time**

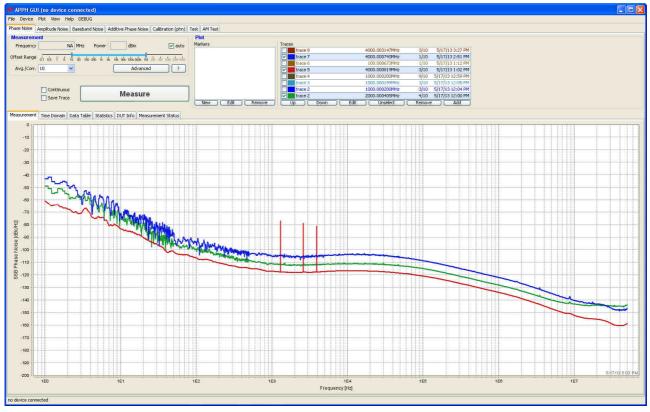

Total measurement time consists of setup time, transfer time plus the number of performed correlations times the time per correlation

|                  | Typical setup time<br>(sec) | Time per average<br>(sec) | Nr. of points |
|------------------|-----------------------------|---------------------------|---------------|
| 0.1 Hz to 50 MHz | 3                           | 80                        | ~ 1800        |
| 1 Hz to 50 MHz   | 3                           | 10                        | ~ 1700        |
| 10 Hz to 50 MHz  | 3                           | 1.5                       | ~ 1500        |
| 100 Hz to 50 MHz | 3                           | 0.5                       | ~ 1300        |
| 1 kHz to 50 MHz  | <2                          | 0.2                       | ~ 1050        |
| 10 kHz to 50 MHz | <2                          | <0.1                      | ~ 800         |

#### **Data Processing Capabilities**

Graphical user interface: The analyzer employs a graphical user interface based on Windows OS.

## **GUI Interface**

| Display Functions | Phase Noise, Time Domain, Data Table, Residual, Statistics                                     |
|-------------------|--|
| Trace Functions   |  |
| Data Traces       | Display current measurement and/or multiple memory data (up to 16 traces)                      |
| Math              | Addition subtraction resultin lighting or division of trace date                               |
| Title             | Addition, subtraction, multiplication, or division of trace data, offset corrections           |
|                   | Add customized title to each measurement window  |
| Auto-Scale        | Automatically selects scale resolution and reference value to                                  |
| Statistics        | vertically center the trace.   |
|                   | Calculates and displays mean, standard deviation, and peak-to-<br>peak deviation of the trace. |
| Marker Functions  | 16 independent markers   |

## Connectors

- 1. RF inputs: , RF IN, REFIN1, REFIN2, REFOUT1, REFOUT2 : SMA female
- 2. Tuning outputs: Tune1, Tune2 : BNC female
- 3. DC power switch

#### **Connectors (Rear)**

- 1. Baseband inputs: BBIN1, BBIN2) BNC female
- 2. LAN connection: RJ-45
- 3. USB 2.0 host and device
- 4. DC Power plug (6V, 6A)

# **General Characteristics**

**Remote programming interfaces** 

Ethernet 100BaseT LAN interface, USB 2.0 host & device GPIB (IEEE-488.2,1987) with listen and talk (optional) Control language SCPI Version 1999.0

Power requirements 6 VDC; 24 W maximum Mains adapter supplied: 100-240 VAC in/ 6V, 6A DC out Operating temperature range o to 45 °C Storage temperature range –40 to 70 °C Operating and storage altitude up to 15,000 feet

# CE notice

Safety/EMC complies with applicable Safety and EMC regulations and directives.

Weight ≤ 4 kg (9 lbs) net Dimensions

### Options

• GPIB: IEEE-488.2,1987 programming interface
