

POWER QUALITY ANALYZER PW3198

Power Measuring Instruments

Record and Analyze Power Supply Problems Simultaneously with a Single Unit The New World Standard for Power Quality Analysis

Never Miss the Moment

- Detect power supply problems and perform onsite troubleshooting
- Do preventive maintenance to avert accidents by managing the power quality

CAT IV-600V Safety Standard

- Meets the CAT IV safety rating required to check an incoming power line
- Safe enough to measure up to 6,000Vpeak of transient overvoltage

Easy Setup Function with PRESETS

- Just select the measurement course, wiring, and clamps
- Automatic one-step setup based on measurement conditions

Compliant with New International Standards

• High precision with a basic voltage measurement accuracy of 0.1%

One Single Unit Can Solve All Your Power Supply Problems

The number of power supply problems is increasing as power systems are becoming more and more complicated all due to the rising use of power electronics devices plus a growing installed base of large systems and distributed power supplies. The quickest way to approach these problems is to understand the situation quickly and accurately. The PW3198 Power Quality Analyzer is ready to effectively solve your power supply problems.

Troubleshooting

- ✓ Understand the actual power situation at the site where the problem is occurring (e.g., the equipment malfunction, failure, reset, overheating, or burning damage).
- Ideal for troubleshooting solar and wind power generation systems, EV charge stations, smart grids, tooling machines, OA equipment (e.g., computers, printers, and UPS), medical equipment, server rooms, and electrical equipment (e.g., transformers and phase-advancing capacitors).

Field Survey and Preventive Maintenance

- Perform long-term measurements of the power quality and study problems that are difficult to detect or that occur intermittently.
- ✓ Maintain electrical equipment and check the operation of solar and wind power generation systems.
- Manage the parameters with a control set point, such as a voltage fluctuation, flicker, and harmonic voltage.

Power (Load) Survey

✓ Study the power consumption and confirm system capacity before adding load.

Advanced Features for Safe, Simple, and Accurate Measurements

International Standard IEC61000-4-30 Edition 2 Class A

Class A is defined in the international standard IEC61000-4-30, which specifies compatibility with power quality parameters, accuracy, and standards to enable comparison and discussion of the measurement results of different measuring instruments.

The PW3198 is compliant with the latest IEC61000-4-30 Edition 2 Class A standard. The instrument can perform measurements in accordance with the standard, including continuous gapless calculation, methods to detect events such as dip, swell, and instantaneous power failure, and time synchronization using the optional GPS box.

CAT IV-600V Safety

The PW3198 is compliant with the measurement category CAT IV - 600V and can also safely test the incoming lines for both single-phase and three-phase power supplies.

3

Easy to set up - Just select the measurement course and the PW3198 will do the rest

Simply choose the course based on the measurement objective and the necessary configurations will be set automatically.

U Events	Record voltage and frequency and detect errors simultaneously.
Standard Power Quality	Record voltage, current, frequency, and harmonic, and detect errors simultaneously.
Inrush current	Measure the inrush current.
Recording	Record only the TIME PLOT Data but do not detect errors.
EN50160	Perform measurements in accordance with EN50160.

4

Highly Accurate, Broadband, Wide Dynamic Range Makes for Reliable Measurements

DC

Voltage Frequency Range

Harmonic measurement

High-order harmonic measurement

3kHz

Wide range from DC voltage to 700 kHz

Voltage Measurement Range

		Transien	t overvoltag
	Line-to-line volta	age (3P4W)	
Line-to-line voltage(1P2W, 1P3 Phase voltage (1P2W, 1P3			
	780V	1300V	6000Vpe
Poth low and high val	tagaa aan ha n	accourad in a a	ingle rong

Both low and high voltages can be measured in a single range.

Basic Measurement Accuracy (50/60 Hz)

Voltage	$\pm 0.1\%$ of nominal voltage
Current	±0.2% rdg. ±0.1% f.s. + Clamp-on sensor accuracy
Power	±0.2% rdg. ±0.1% f.s. + Clamp-on sensor accuracy

World's highest level of basic measurement accuracy. Extremely accurate voltage measurement without the need to switch ranges.

Transient overvoltage can also be measured in a range between the maximum 6,000 V and minimum 1 μs (2 MS/s).

High-order Harmonic

80kHz

Transient overvoltage detection

Waveform example

700kHz

The PW3198 is the first power quality analyzer that can measure the high-order harmonic component of up to 80 kHz.

PW3198 Never Misses the Moment a Power Supply Failure Occurs

The PW3198 can measure all waveforms of power, harmonic, and error events simultaneously. When a problem occurs with the equipment or system on your site, the PW3198 will help you detect the cause of the problem early and solve it quickly. You can depend on the PW3198 to monitor all aspects of your power supplies.

Measure All Parameters at the Same Time

Acquire the Information You Need Quickly by Switching Pages (RMS Value) Just connect to the measurement line, and the PW3198 will simultaneously measure all parameters, such as power and harmonic. You can then switch pages to view the needed information immediately.

DMM Display

Display parameters such as voltage, current, power, power factor, and integral power in a single window.

Waveform Display

Display the voltage and current waveforms on channels 1 to 4 one above the other in a single window.

4-channel Waveform Display Display the voltage and current waveforms on channels 1 to 4 individually.

witch window

Vector Display

Display the measured value and vector of the voltage and current of each order harmonic.

Harmonic Bar Graph Display Display the RMS value and phase angle of harmonics from the 0th order to the 50th either in a graph or as numerical values.

Reliably Detect Power Supply Failures (Event)

To detect power supply failures, measurement does not need to be performed multiple times under different conditions. The PW3198 can always monitor and reliably detect all power supply failures for which detection is enabled.

Transient Overvoltage (Impulse)

A transient overvoltage is generated by a lightning strike or a contact fault or closed contact of a circuit breaker and relay, and often causes a steep voltage change and a high voltage peak.

Voltage Dip (Voltage Drop)

Voltage drops for a short time as a result of large inrush current generated in the load by, for example, a starting motor.

Interruption

The power supply stops instantaneously or for a short or long time because electrical power transmission is stopped as a result of a lightning strike, or because the circuit breaker is tripped by a power supply short circuit.

An excessive increase or decrease of the load causes the operation of a generator to become unstable.

resulting in frequency fluctuations.

Harmonic

Harmonic is generated by a semiconductor control device installed in the power supply of equipment, causing distortion of voltage and current waveforms.

Voltage Swell (Voltage Rise)

A voltage swell is generated by a lightning strike or a heavily loaded power line being opened or closed, causing the voltage to rise instantaneously.

Inrush Current

A large current flows instantaneously at the moment electrical equipment, a motor, or similar devices are powered on.

High-order Harmonic

Voltage and current waveforms are distorted by noise components generated by a semiconductor control device or the like installed in the power supply of electronic equipment.

An increase or decrease in the load connected to each phase of the three-phase power supply or an unbalanced operation of equipment and devices causes the load of a particular phase to become heavy so that voltage and current waveforms are distorted, voltage drops, or negative phase sequence voltage is generated.

Simultaneous Recording of TIME PLOT Data and Event Waveforms

TIME PLOT Data

TIME PLOT Recording of All Parameters

The PW3198 can simultaneously record 8,000 or more parameters, such as voltage, current, power, power factor, frequency, integral power, harmonic, and flicker, at the specified recording interval. The PW3198 never fails to capture the peak because it performs calculations continuously and records the maximum, minimum, and average values within the recording interval.

Event Waveforms Capture up to 55,000 Instantaneous Waveforms of Power Supply Failures

The PW3198 can record up to 1,000 instantaneous waveforms of power supply failures (up to 55,000 when repeat recording is set to ON) while performing TIME PLOT recording.

This list records instantaneous waveforms of power supply failures

(events), such as a voltage drop or inrush current, along with the time

or other information. Events are always monitored, regardless of the

recording interval of the TIME PLOT recording.

Event Waveform

The PW3198 lets you view the instantaneous waveform (200 ms) of a power supply failure in the window.

MS value changes ver 30 seconds

hen a voltage drop or rush current occurs, MS value changes re recorded over 30 aconds simultaneously. his function can also a used to check the bitage drop caused by rush current generated the start of the motor.

30 seconds

Use Model 9624-50 PQA-HiVIEW PRO (version 2.00 or later) with a PC to analyze the data collected by the PW3198.

Viewer Function

Display and analyze the data recorded by the PW3198 POWER QUALITY ANALYZER.

Report Creation Function

Automatically and effortlessly create rich reports for compliance and record management. Report output items: Voltage/current RMS value fluctuation graph, harmonic fluctuation graph, inter-harmonics fluctuation graph, flicker graph, integral power graph, demand graph, total harmonic voltage/current distortion rate list, EN50160 window (Overview, Harmonic, Measurement Results Category), worst case, transient waveform,

maximum/minimum value list, all event waveforms/detailed list, and setup list

Print Examples

TIME PLOT Recording of Parameters

Other Functions

EN50160

CSV Conversion of Measurement Data

Convert data in the range specified in the TIME PLOT window into CSV format and then save for further processing. The 9624-50 can also convert event waveforms into CSV format. Open CSV data using any commercially available spreadsheet software for advanced data management and analysis.

Even Analyze Data Recorded with Models 3196 and 3197 PQAs Data recorded with the HIOKI 3196 and 3197 Power Quality Analyzers can also be analyzed

Download Measurement Data via USB/LAN

Data in the SD card inserted in the PW3198 can be downloaded to a PC via USB or LAN.

EN50160 Display Function

EN50160 is a power quality standard for the EU. In this mode, evaluate and analyze power quality in accordance with the standard. You can display the Overview, Harmonic, and Measurement Results Category windows.

9624-50 Specifications

	-
Delivery media	CD-R
Operating environment	AT-compatible PC
OS	Windows XP, Windows Vista (32-bit), Windows 7 (32/64-bit)
Memory	512 MB or more

Large Capacity Recording with SD Card

Data is recorded to a large capacity SD card. The data can be transferred to a PC and analyzed using dedicated application software. If your PC is not equipped with an SD card slot, simply connect a USB cable between the PW3198 and the PC. The PC will then recognize the SD card as removable media.

Remote Measurement Using HTTP Server Function

You can use any Internet browser to remotely operate the PW3198, plus download the data stored in the SD card using dedicated software (LAN access required).

Conduct off-site remote control with a tablet PC using a wireless LAN router

GPS Time Synchronization

The PW9005 GPS BOX lets you synchronize the clock on the PW3198 to the UTC standard time. Eliminate time differences between multiple PQAs and correctly analyze measurement data taken by several instruments.

Simultaneously Measure Three-phase Lines and Grounding Wire

Apart from the main measurement line, you can also measure the AC/DC voltage on another line using Channel 4.

Yes! Simultaneously!

- •Measure the primary and secondary sides of UPS
- •Two-line voltage analysis
- •Measure three-phase lines and grounding wire
- Measure neutral lines to detect short circuits

Measure the input and output of a DC-AC converter for solar power generation

An Assortment of Clamp-on Sensors Covers a Broad Range of Measurements

In addition to current sensors for measuring 100A AC, 500A AC, 1000A AC and 5000A AC rated currents, a 5A AC sensor is also available. In addition, HIOKI's CLAMP ON LEAK SENSORS enable you to accurately measure for leakage current down to the mA level, while the new CT969X-90 AC/DC Clamp On Sensors further widen applications by supporting DC current testing.

Backup and Recovery from Power Failure

The PW3198 uses the new large capacity BATTERY PACK Z1003, enabling continuous measurement for three hours even if a power failure occurs. In addition, a power failure processing function restarts measurement automatically even if the power is cut off completely during measurement.

Flicker measurement

Measure flicker in conformance with IEC 61000-4-15 Ed2. Phase voltage check for Δ connection

Use the Δ -Y and Y- Δ conversion function to measure phase voltage using a virtual neutral point.

400 Hz line measurement

Measure at a power line frequency of 50/60 Hz as well as 400 Hz.

Power Quality Survey Applications

The power supply of the office equipment sometimes shuts down

Survey Objective The power supply of a printer at the office shuts down even though it is not operated. Equipment other than the printer can also sometimes perform a reset unexpectedly.

easurement Method

Setup is very easy. Just install the PW3198 on the site, and measure the voltage, current, and power. To troubleshoot, just select the clamp-on sensor and wiring, and then select the "U Events" course

Analysis Report No failure occurred during the measurement period, but a periodic voltage drop was confirmed. The voltage drop may have been caused by the periodic start and operation of the electrical equipment connected to the power supply line. Equipment, such as a laser printer, copier, and electrical heater, may start themselves periodically due to residual heat. An instantaneous voltage drop is likely to have been caused by inrush current from equipment that consumes a large amount of power.

Medical equipment malfunctions

Survey Objective Replacing the equipment with a new one by the service provider did not improve the malfunction. A survey of the power supply was required to clarify the cause.

easurement Method

NSelect the "U Events" course in the PW3198 in the same way as with the office equipment example.

Voltage and Current Waveforms at the Time Voltage Dip Occurs

Analysis Report It was determined that a voltage dip (voltage drop) occurred and impacted the operation of the equipment. If a voltage dip occurs every day on a regular basis, the probable cause is the start of a large air-conditioning unit, pump, heater, or similar equipment.

Surveying a Solar Power Generation System

Survey Objective

- · Maintain a solar power generation system and check its operation (verify the power quality)
- Troubleshoot (impact on the peripheral equipment, operation shutdown, etc.)

easurement Method

Net up the PW3198 on the site and measure the voltage, current, and power. To survey the power quality, select the "Standard power quality measurement" course in the PRESETS menu. To measure the DC voltage, connect channel 4 to the primary

side of the solar panel.

Connection Example

in.

Example of Voltage Waveforms at the Time of Line Switching

- Analysis Report All parameters can be recorded simultaneously with a single measurement.
- · Identify changes in the output voltage of the power conditioner
- · Presence or absence of the occurrence of a transient overvoltage
- · Frequency fluctuation important for system interconnection
- · Identify changes in the harmonic voltage and current included in the output
- Power (AC), integral power (AC), etc.

Measurement Specifications (For specifications when measuring 400Hz circuits, please inquire with your HIOKI distributor.)

TIME PLOT : The MAX/MIN/AVG of each recording interval for each parameter are recorded.

EVENT : When a power anomaly occurs, approx. 200ms instantaneous waveform is recorded.

TRANSIENT : When a transient overvoltage is detected, the 2ms instantaneous waveforms before and after the occurrence (total 4ms) are recorded.

FLUCTUATION : The RMS fluctuation 0.5s before and 29.5s after an event has occurred are recorded.

HIGH-ORDER HARM : When a high order harmonic event occurs, the 40ms instantaneous waveform is recorded.

neasurement method	RMS voltage refreshed each hair-cycle : The RMS type, RMS voltage values are calculated using sample data for 1 waveform derived by overlapping the voltage waveform every half-cycle RMS current refreshed each half-cycle : RMS current is calculated using current waveform data sampled every half-cycle
Sampling frequency	200kHz
leasurement range, resolution	RMS voltage refreshed each half-cycle : 600.00V, 0.01V
	RMS current refreshed each half-cycle : Based on clamp-on sensor in use; see Input specifications
leasurement accuracy	RMS voltage refreshed each half-cycle : ±0.2% of nominal voltage (With 1.666% f.s. to 110% f.s. input and a nominal input voltage of at least 100 V ±0.2% rdg.±0.08% f.s. (With input outside the range of 1.666% f.s. to 110% f.s. or a nominal input voltage of less than 100
	RMS current refreshed each half-cycle : ±0.3% rdg.±0.5% f.s. + clamp-on sensor accuracy
well/ Dip/ Interruption	FLUCTUATION
isplay item	Swell : Swell height, Swell duration
	Dip : Dip depth, Dip duration Interruption : Interruption depth, Interruption duration
Measurement method	Swell : A swell is detected when the RMS voltage refreshed each half-cycle exceeds the threshold in the positive direction Dip : A dip is detected when the RMS voltage refreshed each half-cycle exceeds the threshold in the negative direction
	Interruption : An interruption is detected when the RMS voltage refreshed each half-cycle exceeds the threshold in the negative direction
lange and accuracy	See RMS voltage refreshed each half-cycle
,	
irush current	
isplay item	Maximum current of RMS current refreshed each 1/2 cycle
leasurement method	Detected when the RMS current refreshed each 1/2 cycle exceeds the threshold in a positive direction
lange and accuracy	See RMS current refreshed each half-cycle

ouncine bo value (on+ only,	
Measurement method	Average value during approx. 200ms aggregation synchronized to reference channel (CH4 only)
Sampling frequency	200kHz
Measurement range, resolution	Based on clamp-on sensor in use (with release of new clamp-on sensor)
Measurement accuracy	±0.5% rdg.±0.5% f.s. + clamp-on sensor accuracy

Active power/ Apparent power/ Reactive power

Active power/ Apparent pov	wer/ Reactive power TIME PLOT EVENT
Display items	Active power : Active power for each channel and sum value for multiple channels.
	Sink (consumption) and Source (regeneration)
	Apparent power : Apparent power of each channel and its sum for multiple channels No polarity
	Reactive power: Reactive power of each channel and its sum for multiple channels
	Lag phase (LAG: current lags voltage) and Lead phase (LEAD: current leads voltage)
Measurement method	Active power: Measured every 10 cycles (50 Hz) or 12 cycles (60 Hz)
	Apparent power : Calculated from RMS voltage U and RMS current I
	Reactive power : Calculated using apparent power S and active power P
Sampling frequency	200kHz
Measurement range, resolution	Depends on the voltage × current range combination; see Input specifications
Measurement accuracy	Active power: ±0.2% rdg.±0.1%f.s. + clamp-on sensor accuracy
	Apparent power: ±1 dgt. for calculations derived from the various measurement values
	Reactive power: ±1 dgt. for calculations derived from the various measurement values

Active energy /Reactive energy

Active energy /Reactive ene	ergy TIME PLOT
Display items	Active energy: WP+ (consumption), WP- (regeneration); Sum of multiple channels Reactive energy: WQLAG (lag), WQLEAD (lead); Sum for multiple channels Elapsed time
Measurement method	Measured every 10 cycles (50 Hz) or 12 cycles (60 Hz) Integrated separately by consumption and regeneration from active power Integrated separately by lag and lead from reactive power Integration starts at the same time as recording Recorded at the specified TIMEPLOT interval
Sampling frequency	200kHz
Measurement range, resolution	Depends on the voltage x current range combination; see Input specifications
Measurement accuracy	Active energy: Active power measurement accuracy ±10 dgt. Reactive energy: Reactive power measurement accuracy ±10 dgt.

Power factor /Displacement power factor

Power factor /Displacemen	t power factor TIME PLOT EVENT
Display items	Displacement power factor of each channel and its sum value for multiple channels
Measurement method	Power factor : Calculated from RMS voltage U, RMS current I, and active power P Displacement power factor : Calculated from the phase difference between the fundamental voltage wave and the fundamental current wave Lag phase (LAG: current lags voltage) and Lead phase (LEAD: current leads voltage
Sampling frequency	200kHz
Measurement range, resolution	-1.0000 (lead) to 0.0000 to 1.0000 (lag)

V - H ۶. - 1-- 1 £

Voltage unbalance factor/ C	Current unbalance factor (negative-phase, zero-phase) TIME PLOT
Display items	Voltage unbalance factor : Negative-phase unbalance factor, zero-phase unbalance factor Current unbalance factor : Negative-phase unbalance factor, zero-phase unbalance factor
Measurement method	Calculated using various components of the three-phase fundamental wave (line-to-line voltage) for three-phase 3-wire (3P3W2M, 3P3W3M) and three-phase 4-wire connections
Sampling frequency	200kHz
Measurement range	Voltage unbalance factor : Component is V and unbalance factor is 0.00% to 100.00% Current unbalance factor : Component is A and unbalance factor is 0.00% to 100.00%
Measurement accuracy	Voltage unbalance factor : ±0.15% Current unbalance factor : —

High-order harmonic voltage	ge component/ High-order harmonic current component (High-onder HARM) TIME PLOT EVENT
Display items	For single incidents and continuous transient incidents High-order harmonic voltage component value High-order harmonic current component value For continuous incidents High-order harmonic voltage component maximum value High-order harmonic current component maximum value High-order harmonic voltage component period High-order harmonic current component period
Measurement method	The waveform obtained by eliminating the fundamental component is calculated using the true RMS method during 10 cycles (50 Hz) or 12 cycles (60 Hz) of the fundamental wave
Sampling frequency	200kHz
Measurement range, resolution	High-order harmonic voltage component: 600.00V, 0.01V High-order harmonic current component: Based on clamp-on sensor in use; See Input specifications
Measurement bandwidth	2kHz (-3dB) to 80kHz (-3dB)
Measurement accuracy	High-order harmonic voltage component: ±10%rdg. ±0.1%f.s. High-order harmonic current component: ±10% rdg.±0.2%f.s. + clamp-on sensor accuracy

Clamp-on sensors specifications (Options)

Clamp-on sensor	CLAMP ON SENSOR 9694	CLAMP ON SENSOR 9660	CLAMP ON SENSOR 9661
Appearance			
Primary current rating	5A AC	100A AC	500A AC
Output voltage	10mV/A AC	AC 1mV/A AC	AC 1mV/A AC
Measurement range		See input specifications	
Amplitude accuracy *	±0.3%rdg.±0.02%f.s. *	±0.3%rdg.±0.02%f.s. *	±0.3%rdg.±0.01%f.s *
Phase accuracy *	±2° or less *	±1° or less *	±0.5° or less *
Maximum allowable input *	50 A continuous *	130 A continuous *	550 A continuous *
Maximum rated voltage to earth	CAT III 3	00Vrms	CAT III 600 Vrms
Frequency characteristics	±1.0% or less for 66Hz to 5kHz (deviation from specified accuracy)		ecified accuracy)
Cord length		3m (9.84ft)	
Measurable conductor diameter	Max.ф15n	nm (0.59")	Max.q46mm (1.81")
Dimensions, Mass	46W(1.81")×135H(5. 230g(78W(3.07")×152H(5.98")×42D(1.65")mm, 380g(13.4oz.)

Clamp-on sensor	CLAMP ON SENSOR 9669	FLEXIBLE CLAMP ON SENSOR CT9667
Appearance		
Primary current rating	1000 A AC	500A AC, 5000A AC
Output voltage	0.5mV/A AC	500 mV AC f.s.
Measurement range	See input	specifications
Amplitude accuracy *	±1.0%rdg.±0.01%f.s. *	±2.0%rdg.±0.3%f.s. *
Phase accuracy *	±1° or less *	±1° or less *
Maximum allowable input *	1000 A continuous *	10000 A continuous *
Maximum rated voltage to earth	CATIII 600Vrms	CATIII 1000 Vrms CATIV 600 Vrms
Frequency characteristics	Within ±2% at 40Hz to 5kHz (deviation from accuracy)	±3dB or less for 10 Hz to 20kHz (within ±3dB)
Cord length	3m (9.84ft)	Sensor to circuit: 2m (6.56ft) Circuit to connector: 1m (3.28ft)
Measurable conductor diameter	Max. φ55 mm(2.17"), 80 (3.15")×20(0.79") mm busbar	Max. φ254mm(10")
Dimensions, Mass	99.5W (3.92") × 188H (7.40") × 42D (1.65") mm, 590g (20.8 oz.)	Circuit box: 35W (1.38") × 120.5H (4.74") × 34D (1.34") mm, 140 g (4.9 oz.)
Power supply	_	LR6 alkaline battery x2, AC Adapter (option) or external 5 to 15 V DC power supply
Options (sold separately)		AC ADAPTER 9445-02 (universal 100 to 240VAC, 9V/1A output/for USA) AC ADAPTER 9445-03 (universal 100 to 240VAC, 9V/1A output/for Europe)
*: 45 to 66Hz		

Clamp-on sensor	CLAMP ON SENSOR 9695-02	CLAMP ON SENSOR 9695-03		
Appearance				
Primary current rating	50A AC	100A AC

Clamp-on AC/DC sensor	(CT9691 bundled with the CT6590)	(CT9692 bundled with the CT6590)	(CT9693 bundled with the CT6590)
Appearance			
Includes	CT9691 ×1, CT6590 ×1	CT9692 ×1, CT6590 ×1	CT9693 ×1, CT6590 ×1
CT9691,CT9692,CT9693 (Clamp	sensor) specifications		
	CT9691 🖉	СТ9692 🤇	СТ9693 🔾
Primary current rating	100A AC/DC	200A AC/DC	2000A AC/DC
Maximum input range (RMS value)	100Arms continuous [*]	200Arms continuous [*]	2000Arms continuous [*]
Maximum rated voltage to earth		CAT III AC/DC 600V	
Frequency band	DC to 10 kHz (-3dB)	DC to 20 kHz (-3dB)	DC to 15 kHz (-3dB)
Cord length		2m (6.5 ft)	
Measurable conductor diameter	35 mm (1.38") or less	33 mm (1.30") or less	55 mm (2.17") or less
Dimensions, Mass	53W(2.09") × 129H(5.08") × 18D(0.71") mm, 230g (8.1 oz.)	62W(2.44") × 167H(6.57") × 35D(1.38") mm, 410g (14.5 oz.)	62W(2.44") × 196H(7.72") × 35D(1.38") mm, 500g (17.6 oz.)
CT6590 (SENSOR UNIT) specifica	ations		
		CT6590	
Range when combined with sensor (H/L selectable)	H range : 100A AC/DC f.s. L range : 10A AC/DC f.s.	H range : 200A AC/DC f.s. L range : 20A AC/DC f.s.	H range : 2000A AC/DC f.s. L range : 200A AC/DC f.s.
Sensor combination Output rate	H range : 1mV/A L range : 10mV/A	H range : 1mV/A L range : 10mV/A	H range:0.1mV/A L range : 1mV/A
Sensor combination measurement range		See input specifications	
Sensor combination accuracy (Continuous input)	±1.5%rdg.±1.0%f.s. (DC ≤ f ≤ 66 Hz)	±1.5%rdg.±0.5%f.s. (DC ≤ f ≤ 66 Hz)	±2.0%rdg.±0.5%f.s. (DC) ±1.5%rdg.±0.5%f.s. (45 ≤ f ≤ 66Hz, ≤ 1800A) ±2.5%rdg.±0.5%f.s. (45 ≤ f ≤ 66Hz, 1800A< ≤ 2000A
Sensor combination accuracy (Phase)	±2deg. (DC < f ≤ 66 Hz)	±2deg. (DC < f ≤ 66 Hz)	±2deg. (45Hz ≤ f ≤ 66 Hz)

(Phase)	±2deg. (DC < 1≤ 66 Hz)	±2deg. (DC < 1 ≤ 66 HZ)	±20eg. (45HZ ≤ 1 ≤ 66 HZ)
Cord length	1m (3.3ft)		
Dimensions, Mass	36W(1.42") × 120H(4.72") × 34D(1.34") mm (excluding protruding parts), 165g(5.8 oz.) (including batteries)		
Power supply	LR6 alkaline battery x2, optional AC adapter, or 5 V to 15 VDC external power		
Options (sold separately)	AC ADAPTER 9445-02 (universal 100 to 240VAC , 9V/1A output/for USA) AC ADAPTER 9445-03 (universal 100 to 240VAC , 9V/1A output/for Europe)		
* : Derating according to freque	irating according to frequency		

Clamp-on leak sensor	CLAMP ON LEAK SENSOR 9657-10	CLAMP ON LEAK SENSOR 9675	
Appearance			
Primary current rating	10A AC (Up to 5A on Model PW3198)		
Output voltage	100 m ^v	V/A AC	
Measurement range	See input specifications (Canr	not be used to measure power)	
Amplitude accuracy *	±1.0%rdg.±0.05%f.s. *	±1.0%rdg.±0.005%f.s. *	
Residual current characteristics	Max. 5mA (in 100A go and return electric wire)	Max. 1mA (in 10A go and return electric wire)	
Effect of external magnetic fields	400A AC/m corresponds to 5mA, Max. 7.5mA		
Maximum rated voltage to earth	CATIII 300Vrms (insulated conductor)		
Cord length	3m (9.84ft)		
Measurable conductor diameter	Max. φ40 mm(1.57")	Max. φ30 mm(1.18oz")	
Dimensions, Mass	74W(2.91")×145H(5.71")× 42D(1.65)mm, 380g(13.4oz.)	60W(2.36")×112.5H(4.43")× 23.6D(23.6")mm, 160g(5.6oz.)	

*: 45 to 66Hz

Options

 • Combination example: For three-phase 4-wire circuits containing leak current

 • PW3198-90
 • 9661 × 3
 • 9675
 • PW9001
 • C1001

 • POWER QUALITY ANALYZER
 • CLAMP ON SENSOR (500A)

 • PW3198 set with
 • PQA HiVIEW PRO 9624-50
